

電源行業 PCB 雷射二維碼打標機
Power supply industry PCB laser QR-code marking machine

- Adopt an integrated overall structure, equipped with automatic identification system;
- Use imported lasers, Laser coding can be performed on many types of PCB;
- Precisely control the position, size, and size of the laser. High repeatability and good consistency;
- The control software is powerful, with graphics alignment, hierarchical setting of parameters and positioning preview functions;
- Develop and connect MES system;
- Product performance is stable and reliable, running for a long time for 24 hours;
- The laser system is equipped with an automated production line, which is stable and efficient.
